

FULL STACK DEVELOPER & TEAM LEADER

Attila Nagy

From architecture to delivery – full-stack development and team leadership, powered by AI-driven workflows.

CURRENTLY

Lynx Solutions

Team Leader & Project Manager

BASED IN

Târgu-Mureș, Romania

Working across Europe

EXPERIENCE

12 years

Since 2014

FOCUS

PHP · Laravel · Vue.js

MySQL · MongoDB · Elastic Search

Full-stack developer and team leader with 12 years building web applications end-to-end — Laravel and PHP behind the API, Vue.js in front of it, MySQL and MongoDB underneath. I lead small teams from architecture through delivery and stay the client's first point of contact throughout. Lately I've been building AI integrations and automation into what I ship, and I'm always learning what's next. Open to contract, project, or team-lead roles — remote, across Europe or beyond.

01 Skills

FRONTEND

HTML5 · CSS · SCSS · JavaScript · jQuery · Vue.js · React · Bootstrap · Foundation

BACKEND & DATA

PHP · Laravel · Symfony · MySQL · MongoDB · Elastic Search · REST APIs · WordPress

AI-ASSISTED

Development with Claude Code · Design with Claude Code Design · Integrations & automation

Agile

Iterative delivery, refinement and code review as part of the weekly rhythm.

02 Experience

2018 – PRESENT

Full Stack Web Developer, Team Leader & Project Manager

Lynx Solutions

PROJECT MANAGEMENT

- Main point of contact for client communication, planning and support
- Assigns tasks based on technical expertise, and writes and refines the task documentation behind them

TEAM LEADERSHIP

- Leads teams of up to 3 engineers across concurrent projects, delivering on schedule with fast, responsive client support
- Trains team members in Elastic Search, Vue.js, Laravel and API integrations
- Designs the architecture for new features and database structures
- Runs code reviews and supports the team's communication and collaboration

DEVELOPMENT

- Builds and maintains features across multiple production projects
- Designs and implements database structures
- Designs UI/UX solutions and tests newly developed features

Online Conference Building CMS

LARAVEL · VUE.JS · MYSQL · MONGODB

A CMS for building online video conferences — inviting attendees, running polls and managing interactive Q&A during live streams. Conference data (chat, polls, questions) lives in MongoDB while user data is managed in MySQL, with an API serving the mobile applications. Built the Vue.js front-end, the Laravel API and both database structures.

EV Charging & Energy Transaction Platform

ELECTROMOBILITY · EUROPE · TEAM OF 6 · PHP DEVELOPER

A European platform managing EV charging and energy transactions — a neutral, hardware-agnostic solution for Charge Point Operators and eMobility Service Providers handling billing, payments, roaming and smart charging. Improved the stability of real-time communication between charging stations and the platform, maintained and optimised the code and database, developed new microservices, and wrote integration and unit tests.

AI Tender Document Writing Platform

LARAVEL · REACT · NODE.JS · LANGCHAIN · LANGSMITH · TEAM OF 3 · DEVELOPER & PROJECT MANAGER

A platform that helps tender writers draft tender documents faster, using AI to extract information from source tender documents and generate content through custom, prompt-built writing tools. Main point of contact for client communication and split the work across a three-person team. Built the React front-end, the Node.js AI service integrating LLMs via LangChain, with LangSmith for monitoring, and the Laravel backend powering the platform.

2015 – 2018

Full Stack Web Developer

Pimal Skill

- Developed web designs and web applications
- Conducted application and design testing
- Performed code reviews

2014 – 2015

Mobile Application Developer

Inno Web

- Developed cross-platform mobile applications using PhoneGap

03 Details
