PROFESSIONAL SUMMARY

Full-stack developer and team leader with 12 years building web applications end-to-end — Laravel and PHP behind the API, Vue.js and React in front of it, MySQL and MongoDB underneath. Leads engineering teams from architecture through delivery and is the client's first point of contact throughout, having managed teams of up to 6 across production platforms in electromobility, conferencing and AI tooling. Recently focused on AI-driven development and automation, integrating LLMs into production workflows with LangChain and LangSmith. Comfortable owning a project end to end — requirements, architecture, database design, delivery and client communication — under Agile practices. Open to full-time, contract, or team-lead roles, remote or based in Romania.

CORE SKILLS

Frontend: HTML5, CSS, SCSS, JavaScript, TypeScript, jQuery, Vue.js, React, Tailwind CSS, Bootstrap, Foundation

Backend & Data: PHP, Laravel, Symfony, Node.js, MySQL, PostgreSQL, MongoDB, Redis, RabbitMQ, Elastic Search, REST APIs, WordPress

Cloud & DevOps: AWS, CI/CD, Docker

AI-Assisted: Development with Claude Code, Design with Claude Code Design, LangChain, LangSmith, Integrations & Automation

Tooling & Design: Git, Figma

Methodology: Agile — iterative delivery, refinement and code review as part of the weekly rhythm

WORK EXPERIENCE

Full Stack Web Developer, Team Leader & Project Manager

2018 — Present

Lynx Solutions · Târgu-Mureș, Romania (working across Europe)

Leadership & Client Management

- Primary point of contact for client communication, planning and support across several concurrent projects
- Lead engineering teams of up to 6, assigning tasks by technical expertise and writing the task documentation behind them
- Train team members in Elastic Search, Vue.js, Laravel and API integrations; run code reviews and support team collaboration
- Design system architecture and database structures for new features before implementation begins

Development

- Build and maintain features across multiple production Laravel/Vue.js applications, from database to UI
- Design and implement relational (MySQL, PostgreSQL) and NoSQL (MongoDB) database structures
- Design UI/UX solutions and test newly developed features prior to release

KEY PROJECTS

Online Conference & CMS Platform — **Laravel · Vue.js · MySQL · MongoDB**

CMS for running online video conferences — attendee invitations, live polls and interactive Q&A during streams. Built the Vue.js front end, the Laravel API, and a dual database architecture (MongoDB for real-time chat/poll data, MySQL for user data) serving both web and mobile clients.

EV Charging & Energy Transaction Platform — **PHP · Microservices · Electromobility · Team of 6**

Hardware-agnostic European platform for Charge Point Operators and eMobility Service Providers, covering billing, payments, roaming and smart charging. Improved the stability of real-time communication between charging stations and the platform, built new microservices, and wrote integration and unit tests.

AI Tender Document Writing Platform — **Laravel · React · Node.js · LangChain · LangSmith · Team of 3**

AI platform helping tender writers draft documents faster, extracting information from source files and generating content through custom prompt-built writing tools. Led client communication and a three-person team; built the React front end, the Node.js/LangChain AI service (monitored via LangSmith) and the Laravel backend.

Full Stack Web Developer

2015 — 2018

Pimal Skill

- Developed web designs and web applications end to end
- Conducted application and design testing
- Performed code reviews

Mobile Application Developer

2014 — 2015

Inno Web

- Developed cross-platform mobile applications using PhoneGap

EDUCATION & LANGUAGES

Bachelor's Degree

Petru Maior University of Târgu-Mureş · 2011 – 2014

Languages

English — Advanced | Hungarian — Native | Romanian — Native
